Index

Bold type is used for contributors to this volume. The suffix e indicates editorial comment; c, a conference report; r, a book review. Abbreviations: fr, fibre-reinforced; lw, lightweight; MOR, modulus of rupture.

Aavik, J. and Chandra, 'Influence of proteins on some properties of portland cement mortar', 91–4
Abaca fr cement composites, 69–73
abrasion resistance
  two-phase composite model for concrete, 169–76
adhesion
  polymer–concrete, 250–1r
  portland cement mortar with incorporated protein, 93, 94
adhesives, 125e
ageing, accelerated
  glass fr cement with added sand, 75–9
  glass fr composites, 127–34
  synthetic fr fibre cement boards, 110–12
ageing properties
  concrete containing crushed concrete fines, 237–8
aggregate
  effect of density on quality, 205–15
  model analysis for effect on wear, 169–76
  recycled crushed concrete fines, 235–40
  size effect on fracture mechanics parameters, 95–102
air entrainment
  portland cement mortar with incorporated proteins, 91–4
Akinmusuru, J. O., Lasisi and Osunade, 'Some factors affecting the creep of laterised concrete', 113–18
alkalinity
  crushed concrete fines, 237
alumina
  in bauxite-waste pozzolana cement, 19–30
Alvarez, M., Salas and Veras, 'Rice husk and fly ash concrete blocks', 177–82
aspect ratio
  natural fibres in cement composites, 69–73
ATF 1055, 109–12
Azad, K. A., Baluch and Ziraba, 'Fracture characteristics of sisal fibre reinforced concrete', 157–68

Baluch, H., Ziraba and Azad, 'Fracture characteristics of sisal fibre reinforced concrete', 157–68
Baradan, B., 'Fly ash-cement based structural materials', 225–8
Bar-Shlomo, S., 'Bending of thin flexible fibre reinforced sheets', 243–7
bauxite-waste pozzolana cement hydration products, 19–30
bending theory for thin flexible fr sheets, 243–7
Bentur, A., and Cree, 'Cement reinforced with steel wool', 217–23
Bentur, A. and Diamond, 'Direct incorporation of silica fume into glass fibre strands as a means for developing GFRC composites of improved durability', 127–35
Bhatty, J. I., 'The effect of retarding admixtures on the structural development of continuously sheared cement pastes', 137–44
bond strength
  fibre–matrix, in steel fr mortars, 43–54
book reviews, 57–60r, 183–7r, 249–53r
bridges, 57r

calcium hydroxide
  in bauxite-waste pozzolana cement, 19–30
carbonation
  lw aggregates and concrete, 209–11
casein
  in portland cement mortar, 91–4
cellulose fibres
  in fibre cement boards, 109–12
cement composites
  air-cured Abaca fr, 69–73
  bending of thin flexible fr sheets, 243–7
  effect of sand addition to glass fr cement, 75–9
  ferrocement under combined bending and axial loads, 229–33
  fly ash-based, 225–8
  steel fr cement from steel wool, 217–23
  strain rate effects on fracture, 184–5r
cement pastes
  bauxite-waste pozzolana, 19–30
  effect of retarding agents in continuous shear, 137–43
cement replacement materials, 57–8r
  bauxite-waste pozzolana, 13–30
Chandra, S. and Aavik, 'Influence of proteins on some properties of portland cement mortar', 91–4
clay, expanded
  quality of aggregates, 206–7, 208
coatings, polymer, 250r
Codes and Standards
  concrete technology, 186r
  low-cost building materials, 186–7r
  nuclear safety related structures, 183–4r
compressive strength
  aggregate size effects, 99
  bauxite-waste cement pastes, 27–9, 30
  clay–sand–rice husk ash bricks, 107
  concrete containing crushed concrete fines, 237–9
  effect on wear of concrete, 174–5
  fly ash cement composites, 226–7
  lw concrete at very low temperatures, 3, 6, 7, 10, 13, 14
  portland cement with incorporated protein, 93
  rice husk and fly ash lw concrete, 178–82
concrete technology, 186–7r
conferences and symposia
  forthcoming, 61–5, 119–23, 188–93, 254–7
  reports, 56c
Cornelissen, H. A. W., Wolinski, Hordijk and Reinhardt, 'Influence of aggregate size on fracture mechanics parameters of concrete', 95–103
corrosion, 249r
  lw concrete, 211
  reinforced and prestressed concrete, 58–9r
  steel fr concrete, 195–6e
courses, 66, 124, 194, 258
Coutts, R. S. P. and Warden, 'Air-cured Abaca reinforced cement composites', 69–73
Cree, R. and Bentur, 'Cement reinforced with steel wool', 217–23
cracking
  lw concrete, 212, 214
  mortar cubes on shear loading, 33–41
  polyolefin fr composites under cyclic loading, 150–3, 154
  propagation in brittle matrix composites, 56c
  shear of prestressed steel fr concrete beams, 81–90
  sisal fr concrete, 157–68
  steel fr concrete in aggressive environments, 195–6e
  stress crack opening displacement

and aggregate size, 99–102
creep
concrete containing crushed concrete fines, 239, 240
laterised concrete, 113–17
cryogenics, see low temperatures
curing, steam
portland cement with incorporated protein, 93, 94
curing, water
lw concrete, 210, 212, 213, 214
curing time
effect on creep of laterised concrete, 115, 117
cyclic testing
freeze–thaw behaviour of steel fr concrete, 195e
freeze–thaw resistance of lw concrete, 208–9, 210
lw concrete at very low temperatures, 3–17
loading of polyolefin fr composites, 145–55

Darwish, I. Y. S., and Narayanan, 'Shear in prestressed concrete beams containing steel fibres', 81–90
Davies, J., Yim and Morgan, 'Determination of fracture parameters of a punch-through shear specimen', 33–41
degradation
natural fibre composites, 1e
density
Abaca fr cement composites, 72, 73
clay–sand–rice husk ash bricks, 107
effect on quality of lw concrete, 205–15
glass fr cement with added sand, 76, 79
rice husk and fly ash lw concrete, 178–9
synthetic fr cement boards, 110, 112
design
bridges, 57r
concrete framed structures, 249r
ferrocement under combined bending and axial loads, 229–33
formwork, 185r
masonry, 59r
natural-fibre composite roofing, 1e
nuclear structures, 183–4r
steel fr concrete in aggressive environments, 195e
Diamond, S. and Bentur, 'Direct incorporation of silica fume into glass fibre strands as a means for developing GFRC composites of improved durability', 127–35
Dolanit, 109–12
drying shrinkage, see under shrinkage

durability
glass fr cement with added sand, 77–8, 79
glass fr concrete, 59–60r
improved in glass fr composites, 127–34
dynamic behaviour, 184r

early-age concrete, 251r
elasticity (see also Young's modulus)
concrete containing crushed concrete fines, 237–8
lw aggregates, 206–8
lw concrete at very low temperatures, 13, 17
polyolefin fr composites under cyclic loading, 145–55
synthetic fr cement boards, 110, 112
theory of bending of thin flexible fr sheets, 243–7
epoxy formulations, 125e

failure modes
shear of prestressed fr concrete beams, 86–90
ferrocement
design under combined bending and axial loads, 229–33
fibre characteristics
effect in polyolefin fr composites under cyclic loading, 145–55
fibre content
steel fr cement from steel wool, 220, 221
steel fr concrete, 200–201
fibre pullout
fracture model for sisal fr concrete, 157–68
reistance of steel fr cement from steel wool, 221–2
tests on steel fr mortars, 43–54
fibre–matrix bond strength
steel fr mortars, 43–54
fibre-reinforced sheets
theory of bending, 243–7
finite element analysis
shear loading of cubes, 33, 34, 36–41
fire damage repair, 251r
flax
in fibre cement boards, 109–12
New Zealand, 69–73
flexural strength
fly ash cement composites, 226–7
glass fr cement with added sand, 76–8, 79
MOR of high-durability glass fr cement composites, 129–34
MOR of steel fr cement from steel wool, 220–3
natural fibre replacements for asbestos, 69–71
portland cement mortar with incorporated protein, 93
steel fr mortars, 43–54
synthetic fr fibre cement boards, 11–12
thin flexible fr sheets, 243–7
flexural toughness
steel fr mortars, 52
fly ash
additive to crushed concrete fines aggregate, 236, 237–40
cement composites, 58r, 225–8
lw concrete, 177–82
quality of aggregates, 206–7, 212
formwork, 185r
fracture behaviour
sisal fr concrete, 157–68
strain rate effects in cement composites, 184–5r
fracture energy, 252–3r
aggregate size effects, 95–102
sisal fr concrete, 157–68
strain rate effects on steel fr concrete, 199–204
fracture mechanics
aggregate size effect, 95–102
fracture mode
high-durability glass fr cement composites, 132–3
mechanisms in brittle matrix composites, 56c
fracture strength
mortar cubes on shear loading, 33–41
fracture toughness, 252–3r
high-durability glass fr cement composites, 129–34
natural fibre replacements for asbestos, 71–3
shear loading of mortar cubes, 33–41
steel fr concrete, 250r
framed structures, 249r
freeze–thaw behaviour
lw aggregates and concrete, 208–9, 210
steel fr concrete, 195e
thermal strain on lw concrete, 5–7, 8, 13–17
fresh concrete, 251–2r
frost damage, see freeze–thaw behaviour

glass fr cement
composites of improved durability, 127–34
sand addition in composites, 75–9
glass fr concrete, 59–60r
gluten
in portland cement mortar, 91–4
Gray, R. J., and Johnston, 'The influence of fibre–matrix interfacial bond

strength on the mechanical properties of steel fibre reinforced mortars', 43–55
